

Drought Resistance

Very High

Leaf

Fine

Maintenance

Very Low

Shade Tolerance

Up to 50%

Wear

Very High

ABOUT THE PRODUCT

TifTuf Bermuda has a very fine leaf blade with dense growth, making it ideal for a wide variety of applications. Its density enables it to handle high wear situations such as back yards and sport fields. TifTuf requires on average of 38% less water than other varieties, has a 10 year product warranty and is 100% genetically pure.

This turf is drought tolerant, shade tolerant, wear tolerant and maintains colour during winter months.

AFTERCARE

Establishing

- Do not use a starter fertiliser.
- It is okay to use Oxafert as a pre-emergant, best to use between Sep-Nov and Mar-May
- Weeks 1 & 2: Water deeply 1-2 times a daily
- Weeks 3 & 4: Water deeply every second day
- Weeks 5 & 6: Water deeply twice a week
- Week 7 onwards: Water deeply regularly
- Leaf must be kept continually moist throughout establishment period

Mowing

- Mow 3-7 days after installation (ensure turf has taken root before mowing)
- Mow at 20-40mm cutting height
- Mowing may be required on a 4-7 day interval

Watering

- UGA tests showed TifTuf uses 38% less water than other varieties
- Though drought tolerant, TifTuf best performs when it receives a deep watering regularly
- In warm weather, watering should be increased

Fertilising

- Should be fertilised 2-3 times a year, early in spring, summer and autumn
- Fertiliser should be applied at 1/4 rate. Over fertilising can damage the turf
- If using organics, use only liquid fertilisers
