 COVERS UP TO 100M²**

**"I GIVE ALL MY NEW
 LAWNS & GARDENS
 THE PERFECT START."**

GREAT FOR ALL LAWN TYPES

This easy-to-use starter fertiliser with nutrient accelerator for healthy root growth and trace elements will ensure the best possible start for your newly laid lawn as well as help drought-proof your new lawn for life.

CONTAINS MOISTURE MAGNETS™

A fantastic way to save on water usage. These tiny water storage crystals hold and supply your new lawn water where it most needs it. Moisture Magnets can hold 400x their weight in water which hydrate plants during vital early stages of their development and last for up to 6 months in the soil.

Lawn Launcher

Lawn Launcher is a blend of fertiliser and **Moisture Magnets** Premium Water Crystals, which should be used when laying a new lawn; establishing a new lawn or planting.

Lawn Launcher has a ready supply of essential nutrients vital for strong plant and root establishment in all new lawns and gardens. In addition, its **Moisture Magnets** reduce the risks involved in lawn establishment and plants dying off during water restrictions and extreme heat.

Lawn Launcher is ideal for Sir Walter Buffalo DNA Certified, Eureka Kikuyu, Nullarbor Couch, RTF Fescue, Platinum Zoysia and all other lawn types and most trees, shrubs and flowering plants. Its blend of high quality slow release and organic nitrogen, potassium and phosphorous granulated fertilisers, trace elements and **Moisture Magnets** have been designed specifically to improve the capability of soils and growing media to retain

water and plant nutrients giving them the best start in life. The water and nutrient retained in **Moisture Magnets** is for plant use only. **Lawn Launcher** can dramatically reduce your water costs.

HOW IT WORKS:

Lawn Launcher is a mix of high quality starter fertiliser and **Moisture Magnets** Premium Water Crystals, which are small free flowing white granules that resemble sugar crystals when dry.

On the introduction of water they swell dramatically to become super absorbent sponges. When placed in the root zone of plants they capture and store several hundred times their own weight in water and soluble compounds such as fertiliser. 95% of absorbed water and nutrient is available back to the plant on demand through their roots, which grow directly into the water swollen crystals. **Moisture Magnets** store water exactly where the lawn and garden needs it every time it rains, significantly reducing the need for hand watering of your lawn and garden.

APPLICATION RATE:

For the Lawn: Should be applied at a rate of 30g/per m². 1 x 3kg bucket will cover up to 100m². Lightly rake through your turf underlay to a depth of 30mm before installing your lawn.

Pots, Tubs and Containers: 10g per litre of potting mix.

Trees, Shrubs and Garden Beds: Mix 10g per litre, with soil taken from hole, then backfill mix product back into the hole. Water thoroughly.
