ABOUT THE PRODUCT

Eureka Kikuyu is a coarse textured grass with bright green leaves. It has shown rapid recovery from damage and provides a good, dense coverage. Eureka is a vigorous grower that stands up to a wide range of conditions. Good for both home lawns and larger spaces such as racecourses, parks, fairways and reserves, Eureka prefers a sunny aspect.

This turf shows good resistance to wear, water logged soils and comes with a 10 year product warranty.

AFTERCARE

Establishing

- Deep water immediately after installation (within half an hour)
- Water thoroughly for 7-10 days, or until established, so turf and roots are kept moist

Mowing

- Eureka Kikuyu looks best when mown every 7 days at a height of approx. 25mm during the warmer months
- Regular mowing will prevent thatching and encourage a tight growth mat
- Spring is the best time to de-thatch lawn so mow very low at the beginning of spring to remove the thatch

Watering

- Once established, water twice a week during summer to maintain
- During winter, water as weather permits

Fertilising

- Fertilise 3-4 times a year with a complete slow release fertiliser
