ABOUT THE PRODUCT

Santa Anna Couch is a summer active grass and is commonly used on domestic lawns in South Australia. With a fine leaf, bright green colour and tight-knit growth habit, it can look like a fine carpet. Like all couch grasses, it goes dormant in winter and will require coring and scarifying every 2-3 years for maintenance. Additionally, Santa Anna requires a full sun position and is popular with those who like the look of a manicured lawn.

AFTERCARE

Establishing

- Deep water daily for three weeks after installation, or until established

Mowing

- Regular weekly mowing is recommended, particularly during spring and summer
- Cutting height can be anywhere between 10mm - 36mm
- When mowing, only take 1/3 off the leaf at one time

Watering

- Once established, water weekly or as necessary, depending on weather
- Give 1-2 deep waters per week in the heat of summer, using the colour of the lawn as guidance. If it turns a shade of blue/grey it can be an indication that the lawn is stressed and in need of water

Fertilising

- Fertilise 6 weeks after laying, then 3 times a year (summer, autumn and spring) for optimal results
