Maintenance

Very Low

Shade Tolerance

Up to 50%

Wear

Very High

## ABOUT THE PRODUCT

TifTuf Bermuda has a very fine leaf blade with dense growth, making it ideal for a wide variety of applications. Its density enables it to handle high wear situations such as back yards and sport fields. TifTuf requires on average of 38% less water than other varieties, has a 10 year product warranty and is 100% genetically pure.

This turf is drought tolerant, shade tolerant, wear tolerant and maintains colour during winter months.

## AFTERCARE

### Establishing

- Do not use a starter fertiliser
- Deep water immediately after installation (within half an hour)
- Leaf must be kept continually moist throughout establishment period, following watering instructions below

### Mowing

- Mow 3-7 days after installation (ensure turf has taken root before mowing)
- Cutting height can be anywhere between 10mm - 36mm
- Mowing may be required on a 4-7 day interval

### Watering

- Weeks 1 & 2: Water deeply 1-2 times a day
- Weeks 3 & 4: Water deeply every second day
- Weeks 5 & 6: Water deeply twice a week
- Week 7 onwards: Water deeply regularly, weather dependant
- UGA tests showed TifTuf uses 38% less water than other varieties
- Though drought tolerant, TifTuf best performs when it receives regular deep watering
- In warm weather, watering should be increased

### Fertilising

- TifTuf should be fertilised 2-3 times a year; early in spring, summer and autumn
- Fertiliser should be applied at 1/4 rate as over fertilising can damage the turf
- If using organics, use only liquid fertilisers
- It is okay to use Oxafert as a pre-emergent. For best results use between Sep-Nov and Mar-May
